Quick Start Guide For Drip-Free Use

Inicios rápidos de BriteTap • Démarrage rapide de BriteTap

1 Use a beverage cooler. Ice chests for food don't work.

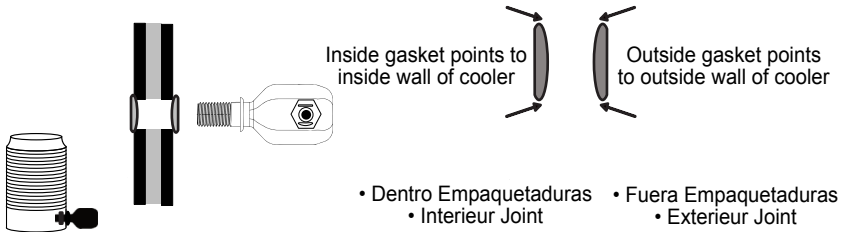

• Beverage Cooler • Termos • Fontaines

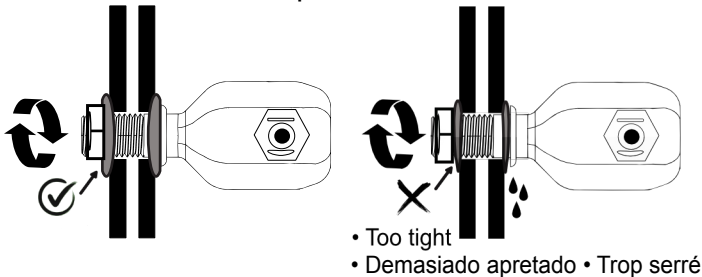

• Ice Chest • Hieleras • Glacieres

2 Set up the waterer with the gaskets in the right direction.

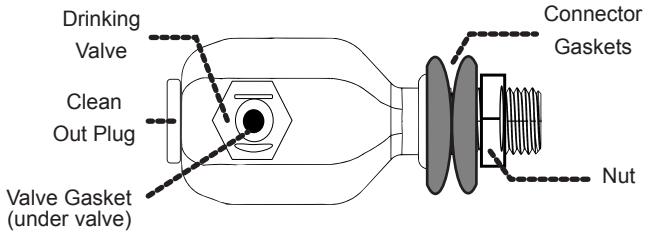

3 Don't over tighten the nut. Over tightening bends the gaskets and causes drips.

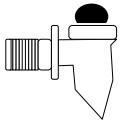

• Too tight
• Demasiado apretado • Trop serré

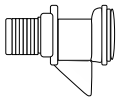

Parts List

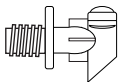

The BriteTap waterer replaces the spigot on most beverage coolers. See set up instructions for your brand of cooler.

Rubbermaid® spigot
La Espita Rubbermaid®
Robinet Rubbermaid®

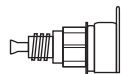

Igloo® spigot

Set Up. Instalación. Placement.

Training Your Chickens To Drink

1. Remove all other water sources from your chicken coop and pen.
2. Begin the transition to the BriteTap waterer in the morning. After the chickens have eaten dry food pellets, they will be thirsty.
3. Show the chickens the BriteTap waterer by tapping the valves to release water. Let the chickens see water coming out of the valves.
4. If they don't drink immediately, try tapping the waterer again after 5 minutes. Repeat several times until one chicken drinks. Try again later in the day if necessary.
5. Once one chicken learns to drink, the rest of the flock will learn from that bird.
6. Be patient. Don't switch back and forth between the BriteTap and your old waterer. This confuses the birds and they won't transition to the new waterer.

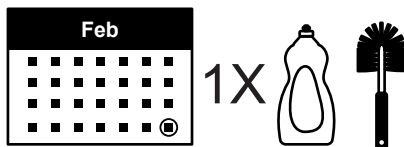

Cómo Adiestrar A Las Gallinas Para Que Utilicen El Bebedero

1. Retire el resto de fuentes de agua del gallinero y del corral.
2. Comience la transición al bebedero BriteTap por la mañana. Una vez que las gallinas hayan comido pienso seco, tendrán sed.
3. Muestre a los animales el funcionamiento del bebedero BriteTap tocando las válvulas para que desprendan agua. Deje que vean como sale el agua de la válvula.
4. Si no beben de inmediato, pruebe a accionar de nuevo el bebedero pasados 5 minutos. Repita varias veces hasta que una de las gallinas beba. Pruebe de nuevo a lo largo del día si es necesario.
5. Una vez que una gallina aprenda a beber, el resto aprenderá de ella.
6. Tenga paciencia. No cambie una y otra vez entre el bebedero BriteTap y su antiguo bebedero, pues confundiría a las aves.

Entraîner Les Poulets à Boire

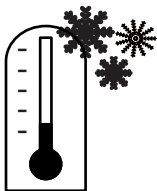

1. Retirez toutes les autres sources d'eau de votre poulailler.
2. Commencer la transition vers l'abreuvoir BriteTap le matin. Après avoir mangé des granulés secs, les poulets auront soif.
3. Montrez à vos poulets l'arroseur BriteTap en tapotant les vannes pour libérer l'eau. Faites en sorte que les poulets voient l'eau sortir de la vanne.
4. S'ils ne boivent pas immédiatement, essayez à nouveau de taper sur l'abreuvoir après 5 minutes. Répétez plusieurs fois jusqu'à ce qu'un poulet commence à boire. Réessayez plus tard dans la journée si nécessaire.
5. Une fois qu'un poulet a appris à boire, le reste du troupeau apprendra de cet oiseau.
6. Soyez patient. Ne faites pas de changement entre l'arroseur BriteTap et votre ancien arroseur. Cela risque de les dérouter.

Cleaning. Limpieza. Nettoyage.

- Clean once per month with dish washing detergent.
- Limpiar una vez al mes con detergente para platos.
- Nettoyer une fois par mois avec un détergent à vaisselle

Cold Temperatures

Visit our web site for information regarding watering your flock when the outside temperature is below freezing.
